Marine Corps Automated Settlement Sheet Process (MCASSP)

MSgt Udart

* ODSE version fielded @ San Diego, I MEF, 29 Palms, Quantico, NMCI for push on 15 Sep, II MEF, MCB CLNC, MCAS New River on 11-15 August 2003

* New MCASSP version is 2003.1.03.

1. Problem Trouble Reports (PTR's). Currently know issues which should be patched on 28-30 September.

* LSL previously paid for Officer's not being brought into MCASSP.
* Leave reported late outside of the current summary period not posting as "Leave used but not considered".

* Change Non Accrual from “Blank” to None to adjust CLB on Officer’s.
* BAH Partial showing up as Misc Credit & being paid @ daily rate vice monthly rate.
* BAH is current remark only, IE.. If member goes on terminal leave and was drawing “Partial” BAH and it should change to “Own-Right”, MCASSP will pay the O/R rate for the whole month.

* BAS is current remark only, IE.. If member goes home awaiting PEB and was drawing BAS Enlisted and it should change to RIKNA, MCASSP will pay RIKNA for the whole month.
* Alternate SITW of $0.00 is not eliminating SITW on month of discharge. MCASSP is using SITW tables to compute tax.

* When drop TTC 378 is reported, ACDU Base Date is being auto populated with the PEBD. This gives a miscalculation on Dis Sev Pay and Seps/Readjustment Pay. (Fix scheduled for Nov 2003. You MUST verify ACDU base date when paying any type of separation pay).

* Combat leave credit for CLB used does

not allow for ½ day credit (Only full

days). You must verify tax withheld

manually and enter a checkage since

MCASSP will apply a larger LSI

* Stand alone SITW calculations are not 100% accurate.
* Transactions are not being displayed for some Officer's.
* All MCTFS transactions that deal with pay related items will be visible when clicking on the "Transactions" button vice the limited remarks from the last U&E, which is the current design.

* Future dated “Start” allotments are being brought in for current month deduction on one month summary period.
* DMR credits & debits are showing up as tax code 1 vice tax code 4.

WHATS COMING NEXT ? ?

* Interface with DTMS so MCASSP.db file will stay with the DTMS NAVMC 11060 from cradle to grave, resulting in easier zero balancing and tracking. Possibly during FY 04, once DTMS is up and in full production.
